

?

Cordial saludo, en este espacio se debe subir el enlace del repositorio en github del segundo parcial donde se deberá explicar el paso a paso del "Sistema de Logística de Monedas Inteligentes" teniendo presente lo siguiente:

The diagram illustrates a robotic assembly line for glass cups. At the top left, a 'Contador de Monedas' (Coin Counter) is shown with five circles of increasing size. Below it, a 'Sistema de Transporte y Embalaje' (Transport and Packaging System) consists of a conveyor belt with seven glass cups. Two orange robotic arms are positioned above the cups; one is labeled 'Tapa Vaso' (Cup Cap) in green text. To the right, a 'Dashboard en Tiempo Real' (Real-time Dashboard) displays a pie chart, a bar chart, and a line graph. Below the dashboard is a 'Chatbot que comente por voz el proyecto' (Voice chatbot that comments on the project), represented by a blue robot icon with a speech bubble. At the bottom, a 'Carro' (Car) is shown on a winding 'Pista para llegar a la meta' (Track to reach the goal). The track has three brick 'Obstáculo' (Obstacle) blocks in the way, with a red arrow pointing to one labeled 'Obstáculo' in red text. A checkered flag marks the end of the track.

A 3D perspective view of a robotic assembly line simulation. On the left, a white rectangular box with four black circular ports on top represents a material source. A black conveyor belt extends from this box to the right. A blue robotic arm with a red gripper is positioned above the conveyor. The arm is mounted on a blue base with a red wheel. A yellow line indicates the path of the arm's movement. The background is a solid light gray.

Objetivos específicos

- ### ELEMENTOS DIFERENCIALES PARA GRUPO

Teniendo presente la conformación de varios grupos se procederá a colocar tips diferenciales que son relevantes en el diseño del proyecto, teniendo:

Diagram illustrating the components and tasks of the Robotic Car Project:

- 1) Carro de Valores y Sistema Tipo Oruga** (Value Car and Crawler System) → **Superficie Dinámica** (Dynamic Surface). The crawler system is shown navigating a dynamic surface.
- 2) Brazo Robótico Para embalaje** (Robotic Arm for Packaging). The robotic arm is shown packaging coins into containers.
- 3) Algoritmo por obstáculos** (Algorithm for obstacles) → **Algoritmo de Planificación** (Planning Algorithm). The algorithm is designed to handle a minimum of 4 obstacles (dynamic obstacles). The diagram shows a car navigating a track with obstacles.
- 4) Conducción Autónoma-Agente Inteligente con Carga (Mínimo dos Curvas)** (Autonomous Intelligent Agent with Load, Minimum two Curves). The diagram shows a car with a load navigating a complex, winding track.
- 5) Selector en Cadena de vasos de Moneda por Visión Computacional** (Chain of coin selection by computer vision). The diagram shows a sequence of coin selection steps, including a coin being selected and a coin being placed in a container.
- 6) Desarrollo de Dron Para el envío de monedas** (Development of Drone for coin delivery). The diagram shows a drone delivering coins to a container.
- 7) Detector de elementos de Monedas y vasos** (Coin and container element detector). The diagram shows a coin and a container being detected by a sensor.
- 8) Ordenamiento por visión computacional monedas** (Coin sorting by computer vision). The diagram shows a sequence of coin sorting steps, including a coin being sorted and a coin being placed in a container.
